**Information Synthesis for Mineral Exploration (Spatial Information Systems)** Goucheng Pan, Deverle P. Harris

The advent of image processing and Geographic Information Systems (GIS) has made a substantial impact in the fields of geology, geochemistry, geophysics, and remote sensing. Addressing this development, this work provides a state-of-the-art overview of techniques for analyzing and combining geoscience data sets for mineral exploration. The nature of the book, which presents fundamental concepts of mineral resources and mineral potential mapping, suggests that it should be included in our Spatial Information Systems (SIS) series. However, readers of books in our Applied Geostatistics series will find it a valuable reference as well.
